

‘Maintenance Recommendations’

The recommended method of cleaning a Design Décor Mirror Tile surface is to use warm clean water and a soft, lint-free cloth. Wring all water from the cloth before wiping the mirror. Dry the surface immediately with a dry, lint-free cloth.

Design Décor Mirror Tiles should be protected during construction site storage and installation.

Design Décor Mirror tiles should be stored in a dry, well ventilated area.

In the event that Design Décor Mirror Tiles are installed without grout:

Care should be taken that sprayed materials such as wall texture, adhesive for wallcovering, or paint has completely cured before Mirror Tile installation.

Avoid spraying cleaners directly onto Design Décor Mirror Tile surfaces. This will help prevent cleaner from contacting the edges of the mirror tiles and damaging them.

Avoid using acid or alkali cleaners for mirror tile cleanup after installation. Either substance can attack the front surface and edges of the mirror tile. No abrasive cleaners should ever be used on any Design Décor Mirror Tile surface.

Avoid using commercial mirror cleaners that contain ammonia or vinegar.
